SEMESTER - III COURSES

TH:1- PROGRAMMING WITH C++

L 3	T 0	P 0		Course Code: CSEPC 201/TH1	
Total Contact Hours			1	Theory Assessment	
Theory		: 45Hrs	Total Market 100	End Term Exam : 70	
			Progressive Assessment : 30		
Pre-Requisite : Nil					
Credit		:3		Category of Course : PC	

RATIONALE:

Programming with C++ is a foundation course for any would-be IT professional. It gives exposure to the basic techniques of computer programming in current technological scenario. This course is most essential for any curriculum of Computer Science and Engineering.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Describe object-oriented programming (OOP) principles.
- Develop proficiency in C++ syntax and programming constructs.
- Implement advanced OOP features for software design.
- Demonstrate polymorphism and operator overloading.
- Handle exceptions and ensure robust program execution.

Unit	Topic/Sub-Topic	Allotted
No.		Time
		(Hours)
Ι	Introduction to object-oriented programming, user defined types, structures,	12
	unions, polymorphism, encapsulation. Getting started with C++ syntax, data-	
	type, variables, strings, functions, default values in functions,	
	recursion, namespaces, operators, flow control, arrays and pointers.	
II	Abstraction mechanism: Classes, private, public, constructors, destructors,	11
	member data, member functions, inline function, friend functions, static	
	members, and references.	
	Inheritance: Class hierarchy, derived classes, single inheritance, multiple,	
	multilevel, hybrid inheritance, role of virtual base class, constructor and	
	destructor execution, base initialization using derived class constructors.	
III	Polymorphism: Binding, Static binding, Dynamic binding, Static	9
	polymorphism: Function Overloading, Ambiguity in function overloading,	
	Dynamic polymorphism: Base class pointer, object slicing, late binding,	
	method overriding with virtual functions, pure virtual functions, abstract	

	classes.	
IV	Operator Overloading: This pointer, applications of this pointer, Operator	9
	function, member and non-member operator function, operator overloading,	
	I/O operators.	
V	Exception handling: Try, throw, and catch, exceptions and derived classes,	4
	function exception declaration, unexpected exceptions	

1.	Object Oriented Programming with C++ by E. Balagurusamy, McGraw-Hill Education
	(India)
2.	ANSI and Turbo C++ by Ashoke N. Kamthane, Pearson Education
3.	C++: The Complete Reference - Schildt, McGraw-Hill Education (India)
4.	C++ and Object Oriented Programming - Jana, PHI Learning.
5.	Object Oriented Programming with C++ - Rajiv Sahay, Oxford
6.	Mastering C++ - Venugopal, McGraw-Hill Education (India)

TH:2- PROGRAMMING WITH PYTHON

L	Т	Р		Course Code, CSEDC 202/FU2		
3	0	0		Course Code: CSEPC 203/1H2		
Total Contact Hours				Theory Assessment		
Theory		: 45Hrs	Total Marks, 100	End Term Exam : 70

Pre-Requis	ite	: Nil				
Credit		:3		Category of Course : PC		

RATIONALE:

Python is a versatile and beginner-friendly scripting language, renowned for its simplicity and readability. It enables rapid development of applications in fields like web development, data analysis, automation, and artificial intelligence. Learning Python equips students with a powerful toolset to solve complex problems and adapt to evolving technology demands.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Define Python's core syntax, data types, and key concepts of object-oriented programming.
- Explain how control structures and data structures function in Python.
- Implement Python programs using file handling, modules, and libraries like NumPy, Pandas, and Matplotlib for data analysis and visualization.
- Analyze Python scripts to identify and resolve logical or syntactic errors and optimize code using advanced techniques like recursion and lambda functions.
- Develop a real-world mini-project by integrating Python concepts such as OOP, libraries, and automation tools for practical problem-solving.

Unit No.	Topic/Sub-Topic	Allotted Time
1.00		(Hours)
Ι	Introduction to Python: Overview of Python: Features and Applications	8
	Setting Up the Python Environment (Python Installation, IDEs), Python	
	Syntax: Variables, Data Types, and Operators Writing,	
	Executing, and Debugging Python Scripts	
Π	Control Structures and Functions: Conditional Statements: if, else, elif	8
	Loops: for, while, and Nested Loops Functions: Defining, Calling, and	
	Scope of Variables Introduction to Lambda Functions and	
	Recursion	
III	Data Structures in Python: Lists, Tuples, Sets, and Dictionaries:	8
	Operations and Applications, List Comprehensions and Dictionary	
	Comprehensions Working with Strings: Methods and Manipulation,	
	Introduction to Python's Collections Module	

IV	File Handling and Modules: File Operations, Reading, Writing, and	7
	Appending Files Working with CSV and JSON Files, Python Modules:	
	Built-In Modules (e.g., math, os, datetime) Creating and Using Custom	
	Modules	
V	Object-Oriented Programming (OOP) in Python: Understanding	7
	Classes and Objects Concepts of Encapsulation, Inheritance, and	
	Polymorphism, Working with Magic Methods and	
	O p e r a t o r Overloading, Exception Handling in Python	
VI	Advanced Python and Applications: Introduction to Libraries: NumPy,	7
	Pandas, Matplotlib Basics of Web Scraping: Using requests and	
	BeautifulSoup, Scripting for Automation: Working with os and shutil	
	Modules, Mini-Project: Developing a Python Script for a Real-World	
	Problem

TH:3- DATA STRUCTURES

L	Т	Р		Course Code: CSEPC 205/TH3		
3	0	0				
Total Contact Hours			Theory As	Theory Assessment		
Theory		: 45Hrs	Total Market 100	End Term Exam : 70		
			Progressive Assessment : 30			
Pre-Requisite : Nil						
Credit : 3			Category of Course : PC			

RATIONALE:

Data structures are at the core of any computational process. Almost all computer programs use data structures. So, the knowledge of data structures is required to build the foundation of an IT professional. This course is intended to equip the student with the fundamental knowledge.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Explain fundamental data structure concepts, classifications, and algorithm analysis.
- Apply linear data structures such as stacks, queues, and their variations.
- Develop linked list structures, including singly, doubly, and circular linked lists.
- Implement non-linear data structures like trees and perform operations such as insertion, deletion, and traversal.
- Describe graph representations and traversal techniques for efficient data organization.

Unit No.	Topic/Sub-Topic	Allotted Time
		(Hours)
Ι	Introduction to Data Structures: Basic Terminology, Classification of	8
	Data Structure, Operations on Data Structure, Asymptotic and worst-case	
	analysis of algorithms.	
II	Linear Data Structures: Stacks-Introduction to Stacks, Array	10
	Representation of Stacks, Operations on a Stack, Applications of Stacks-	
	Infix-to-Postfix Transformation, evaluating Postfix Expressions.	
	Queues: Introduction to Queues, Array Representation of Queues, Operations	
	on a Queue, Types of Queues-DeQueue, Circular Queue,	
	Applications of Queues-Round Robin Algorithm.	
III	Linked Lists: Singly Linked List, Representation in Memory, Operations	14
	on a Single Linked List, Circular Linked Lists, Doubly Linked Lists, Linked	
	List Representation and Operations of Stack, Linked List Representation and	
	Operations of Queue.	

IV	Non-Linear Data Structures: Trees-Basic Terminologies, Definition and	13
	Concepts of Binary Trees, Representations of a Binary Tree using Arrays	
	and Linked Lists, Operations on a Binary Tree-Insertion, Deletion,	
	Traversals, Types of Binary Trees. GRAPHS: Graph Terminologies,	
	Representation of Graphs- Set, Linked, Matrix, Graph Traversals

TH:4- DIGITAL ELECTRONICS AND COMPUTER ORGANISATION

L 3	T 0	P 0		Course Code: CSEPC 207/TH4
Total Contact Hours		Total Marks: 100 E	Theory Assessment	
Theory : 45Hrs			End Term Exam : 70	
			Progressive Assessment : 30	
Pre Requisite : Nil				
Credit : 3			Category of Course : PC	

RATIONALE:

Digital Electronics and Computer Organization form the foundation of modern computing, enabling the design and functioning of digital systems. They cover essential concepts like logic circuits, memory, and system architecture, bridging hardware and software integration. Learning these topics equips students with the skills to understand and develop efficient, reliable computing systems.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Define key concepts of digital electronics, including number systems, Boolean algebra, and logic gates.
- Explain the principles behind combinational and sequential circuits, such as multiplexers, flip-flops, and counters, and their applications.
- Implement simplified logic circuits using Karnaugh Maps and Boolean algebra to solve real-world digital design problems.
- Analyze the instruction cycle, memory organization, and processor architecture to evaluate system performance and identify bottlenecks.
- Design to simulate a basic CPU operation or create a functional digital circuit using the concepts of digital electronics and computer organization.

Unit No.	Topic/Sub-Topic	Allotted Time
1.00		(Hours)
Ι	Introduction to Digital Electronics: Difference Between Analog	8
	and Digital Signals Number Systems: Binary, Octal, Decimal, and	
	Hexadecimal Conversion Between Number Systems, Binary	
	Arithmetic Boolean Algebra: Basic Operations, Laws,	
	and	
	Simplification	
Π	Logic Gates and Circuits: Logic Gates: AND, OR, NOT, NAND,	7
	NOR, XOR, XNOR, Design and Simplification of Logic Circuits	
	Using Boolean Algebra, Karnaugh Maps (K-Maps) for Simplification	
	Practical Applications of Logic Gates in Real-World	
	Circuits	

III	Combinational and Sequential Circuits: Combinational Circuits:	8
	Multiplexers, Demultiplexers, Encoders, and Decoders, Sequential	
	Circuits: Flip-Flops (SR, JK, D, T) and Their Applications Counters:	
	Synchronous and Asynchronous Counters Registers and Shift	
	Registers: Types and Uses	
IV	Fundamentals of Computer Organization: Basic Structure of a	8
	Computer: CPU, Memory, Input/Output Devices Instruction Cycle:	
	Fetch, Decode, Execute Memory Organization: Types of Memory	
	(RAM, ROM, Cache, Virtual Memory), Introduction to Buses:	
	Address Bus, Data Bus, and Control Bus	
V	Processor Architecture and Control: Unit Introduction to	7
	Microprocessors and Microcontrollers, Basics of Arithmetic Logic	
	Unit (ALU) and Control Unit, Instruction Set Architecture (ISA):	
	RISC vs CISC Pipelining and Performance Optimization in	
	Processors	
VI		
V I	Input/Output Systems and Advanced Topics: I/O Devices and	7
VI	Input/Output Systems and Advanced Topics: I/O Devices and Interfaces: Keyboard, Mouse, Printers, and Storage Devices Interrupts	7
VI	Input/Output Systems and Advanced Topics: I/O Devices and Interfaces: Keyboard, Mouse, Printers, and Storage Devices Interrupts and DMA (Direct Memory Access), Overview of Modern Trends:	7
V I	Input/Output Systems and Advanced Topics: I/O Devices and Interfaces: Keyboard, Mouse, Printers, and Storage Devices Interrupts and DMA (Direct Memory Access), Overview of Modern Trends: Multicore Processors, GPUs, and Embedded Systems, Mini- Project:	7
VI	Input/Output Systems and Advanced Topics: I/O Devices and Interfaces: Keyboard, Mouse, Printers, and Storage Devices Interrupts and DMA (Direct Memory Access), Overview of Modern Trends: Multicore Processors, GPUs, and Embedded Systems, Mini- Project: Design a Simple Digital Circuit or Simulate a Basic CPU	7

RATIONALE:

Algorithms form the backbone of computer science and software engineering. They enable efficient data storage, retrieval, and manipulation, while algorithms provide systematic methods to solve complex computational problems. Mastering the subject of Algorithms equips students with problem-solving skills essential for developing optimized, scalable, and robust software systems.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Define Algorithm with its characteristics.
- Write algorithms with pseudocode.
- Implement algorithms for sorting and searching using appropriate data structures.
- Analyze the time and space complexity of algorithms
- Design solutions using advanced data structures for real-world applications, such as shortest path problems or flow-based algorithms.

Unit No.	Topic/Sub-Topic	Allotted Time (Hours)
Ι	Introduction to Algorithms: Definition of algorithm, Criteria of	8
	algorithms - Input/output, finiteness, definiteness, effectiveness, writing an	
	algorithm with pseudocode, algorithms and programs	
II	Algorithmic Complexity: Concept of algorithmic complexity, space	8
	complexity, time complexity, worst case, average case and best-case	
	analysis, Big-O notation, Finding the complexity of an algorithm	
III	Recursive algorithms: Concept of iteration and recursion, examples of	6
	recursive algorithms – Fibonacci series, factorial, Tower-of-Hanoi problem,	
	Complexities of recursive algorithms, conversion of recursive algorithm to	
	iterative algorithm.	
IV	Algorithm Paradigms: Greedy, Divide and Conquer, Branch and Bound,	8
	Dynamic Programming and Backtracking.	
V	Sorting: The sorting problem. Bubble sort, Selection sort, Insertion sort,	8

	Merge sort, Quicksort, Heap sort, Radix sort. Searching: Symbol Tables, Binary Search Trees, Balanced Search Trees. Hashing, Hash Tables.	
VI	Graphs: Definition of a directed and undirected graph. Paths, Cycles,	7
	spanning trees, Directed Acyclic Graphs. Topological Sorting. Minimum	
	Spanning Tree algorithms, Shortest Path algorithms: Dijkstra's algorithm.	
	Flow-based algorithms.

RATIONALE:

Programming with C++ is a foundation course for any would-be IT professional. It gives exposure to the basic techniques of computer programming in current technological scenario. It is most essential for any curriculum of Computer Science and Engineering. This course provides the student with the skill to write computer programming with C++ language.

Learning Objectives:

After completing this course, students will be able to:

- Implement object-oriented programming (OOP) concepts like encapsulation, inheritance, and polymorphism.
- Use control structures, functions, and recursion to solve programming problems efficiently.
- Work with C++ Standard Library components, including file handling and STL.
- Apply problem-solving techniques through hands-on coding exercises and small projects.
- Develop skills in writing, compiling, debugging, and executing C++ programs.

Unit No.	Topic/Sub-Topic		
		(Hours)	
Ι	Familiarization with C++ programming environment (Editor, Compiler, etc.)	4	
II	Programs using, I/O statements and various operators in C++	4	
III	Programs using C++ expression evaluation and precedence	4	
IV	Programs using C++ decision-making statements and branching statements	4	
V	Programs using loop statements in C++	4	
VI	Programs to demonstrate applications of n-dimensional arrays in C++	4	
VII	Programs to demonstrate use of string manipulation functions in C++	4	
VIII	Programs to demonstrate parameter passing mechanism in C++	4	

IX	Programs in C++ to demonstrate recursion	4
Х	Programs in C++ to demonstrate use of pointers	4
XI	Programs in C++ to demonstrate class, object, constructor, destructor.	8
XII	Programs in C++ to demonstrate function overloading, operator overloading.	6
XIII	Programs in C++ to demonstrate dynamic memory allocation, file operations	6

RATIONALE:

Python is a versatile and beginner-friendly scripting language, renowned for its simplicity and readability. It enables rapid development of applications in fields like web development, data analysis, automation, and artificial intelligence. Learning Python equips students with a powerful toolset to solve complex problems and adapt to evolving technology demands.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Describe Python's features, applications, and fundamental concepts such as control structures, functions, and recursion.
- Develop Python programs using built-in data structures, string manipulations, file handling, and modules for practical problem-solving.
- Implement object-oriented programming concepts, including classes, objects, inheritance, and exception handling, to structure programs effectively.
- Evaluate advanced Python libraries such as NumPy, Pandas, and Matplotlib to process, analyze, and visualize data for specific applications.
- Design a mini-project to integrate Python programming concepts, demonstrating real-world applications and problem-solving capabilities.

Unit No.	Topic/Sub-Topic		
		(Hours)	
Ι	Introduction to Python:	10	
	• Install Python and set up an IDE (e.g., PyCharm, VS Code, Jupyter,		
	Spyder)		
	• Write simple Python scripts to demonstrate variable declarations		
	• Data types, and operators		
	• Debug Python scripts to identify and fix errors.		
Π	Control Structures and Functions:	10	
	• Implement conditional statements (if, else, elif) in real-life		
	scenarios		

	• Write programs using loops (for, while, and nested loops) to solve	
	repetitive tasks	
	• Define custom functions, including examples of recursion, use	
	lambda functions for inline operations.	
III	Data Structures in Python:	10
	• Perform CRUD operations on lists, tuples, sets, and dictionaries,	
	use list comprehensions to filter and transform data	
	• Perform string manipulations using built-in methods	
	• Introduce Python's collections module with practical examples.	
IV	File Handling and Modules:	10
	• Write programs to read, write, and append text files	
	• Work with CSV files using Python's csv module	
	• Read and write JSON files to store structured data	
	• Explore built-in modules like os, math, and datetime, create and	
	import custom modules.	
V	Object-Oriented Programming (OOP) in Python:	10
	• Define classes and create objects with attributes and methods	
	• Implement encapsulation, inheritance, and polymorphism	
	• Work with magic methods (e.g., _init_, _str_) and operator	
	overloading,	
	• Write programs to handle exceptions using try, except, and finally.	
VI	Advanced Python and Applications:	10
	• Use NumPy for numerical operations and Pandas for data analysis	
	• Mini-Project: Develop a Python script to solve a real-world	
	problem (e.g., a data analysis script, a file organizer, or a basic web	
	scraper).

RATIONALE:

Data Structures and Algorithms (DSA) form the backbone of computer science and software engineering. They enable efficient data storage, retrieval, and manipulation, while algorithms provide systematic methods to solve complex computational problems. Mastering DSA equips students with problem-solving skills essential for developing optimized, scalable, and robust software systems.

LEARNING OUTCOMES:

After completion of the course, the students will be able to

- Explain basic terminologies and operations on data structures.
- Perform asymptotic and worst-case analysis of algorithms.
- Implement linear data structures.
- Apply trees and graphs to solve problems.
- Implement sorting and searching algorithms.

Unit No.	Topic/Sub-Topic	Allotted Time (Hours)
Ι	Introduction to Data Structures:	2
	• Write a program to analyze and compare the time complexity of	l
	basic operations (e.g., searching, insertion) on arrays and linked	l
	lists.	1
II	Linear Data Structures:	12
	• Implement stack operations (push, pop, peek) using arrays and linked lists	
	• Develop programs for applications of stacks (e.g., infix-to-postfix conversion and postfix evaluation)	l
	• Implement queue operations (enqueue, dequeue) using arrays and linked lists	1
	• Write programs for types of queues: circular queues and dequeue	

III	Linked	Lists:	10
	•	Implement singly linked list operations (insertion, deletion,	
		traversal).	
	•	Write programs to create and manipulate circular and doubly	
		linked lists	
	•	Implement stack and queue operations using linked lists.	
IV	Non-I	Linear Data Structures:	16
	•	Implement binary tree operations (insertion, deletion, traversal)	
	•	Develop programs for types of binary trees (binary search tree,	
		AVL tree)	
	•	Implement graph representations (adjacency list,	
		adjacency matrix)	
	•	Basic graph traversals (BFS, DFS).	
V	Sortin	lg:	10
	•	Implement sorting algorithms: bubble sort, selection sort,	
		insertion sort, merge sort, quicksort.	
VI	Searc	hing:	10
	•	Write programs for searching using binary search trees (BST) and	
		hash tables	
	•	Implement symbol table operations using balanced search trees.

Total Contact Hours				Practical Assessment	
Theory		: 60Hrs	Total Marks: 50	End Term Exam : 15	
			Progressive Assessment : 35		
Pre-Requisite : Nil					
Credit		: 2		Category of Course : PC	

RATIONALE:

Digital Electronics form the foundation of modern computing, enabling the design and functioning of digital systems. They cover essential concepts like logic circuits, memory, and system architecture, bridging hardware and software integration. Acquiring skill on these topics equips students to understand and develop efficient, reliable computing systems.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Analyze the truth tables of all basic logic gates using CMOS and TTL logic.
- Implement Boolean expressions using logic gates.
- Design arithmetic circuits such as adders and subtractors using ICs.
- Construct sequential circuits, including flip-flops, shift registers, and counters.
- Develop digital circuits with a 7-segment display for counting applications.

Unit No.	Topic/Sub-Topic	Allotted Time
		(Hours)
Ι	To verify the truth tables for all logic gates: NOT, OR, AND, NAND, NOR, XOR, XNOR using CMOS Logic gates and TTL Logic Gates.	6
Π	Implement and realize Boolean Expressions with Logic Gates.	6
III	Implement Half Adder, Full Adder, Half Subtractor, Full Subtractor using ICs	6
IV	Implement parallel and serial full-adder using ICs.	6
V	Design and development of multiplexer and De-multiplexer using multiplexer ICs	6
VI	Verification of the function of SR, D, JK, and T Flip Flops.	8
VII	Design controlled shift registers.	6
VIII	Construct a Single Digit Decade Counter (0-9) with a 7-segment display.	8
IX	To design a programmable Up-Down Counter with a 7-segment display.	8

Pre-Requisite : Nil					
Credit		: 2		Category of Course	: SI

Duration: 3-4 weeks during summer vacation after 2nd Semester.

RATIONALE:

Summer Internship - I is to offer a structured and practical learning experience that prepares individuals for their future careers, helps them make informed career choices, and equips them with the skills and knowledge necessary to succeed in their chosen field. This course provides opportunities to students for hands-on industry experience.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Apply theoretical knowledge gained in their academic coursework to real-world
- situations.
- Develop and refine specific skills relevant to the field.
- Gains hands-on experience in a professional network by interacting with mentors
- and industry professionals.
- Learn to manage their time effectively.
- Clarify career goals.

DETAILED COURSE CONTENTS

SUGGESTED ACTIVITIES:

I Orientation:

- Introduction to the organization's mission, values, and culture.
- Familiarization with workplace policies, procedures, and safety guidelines.
- Orientation to the team and organizational structure.

II Project-Based Learning:

- Description of the main project or tasks the intern will be working on during the internship.
- Detailed project goals and objectives.
- Training and guidance on project-specific tools, technologies, or
- methodologies.

III Technical and Skill Development:

• Training sessions or workshops to enhance technical skills relevant to the internship role

(e.g., programming languages, software tools, laboratory techniques).

• Soft skills development, including communication, teamwork, problem solving, and time management

IV Mentorship and Supervision:

- Regular meetings with a designated mentor or supervisor for guidance, feedback, and support.
- Mentorship objectives and expectations.

V Professional Development:

- Sessions on professional etiquette, networking, and building a personal brand
- Resume writing and interview preparation workshops.

VI Industry and Field-Specific Knowledge:

- Lectures, seminars, or presentations on industry trends, best practices, and emerging technologies.
- Guest speakers from the field to share insights and experiences.

VII Reporting and Documentation:

- Training on how to document project progress, results, and findings.
- Practice in creating reports, presentations, or other deliverables.

VIII Ethics and Professionalism:

- Discussions on ethical considerations within the field.
- Scenarios and case studies related to ethical decision-making

IX Feedback and Evaluation:

- Regular performance evaluations and feedback sessions.
- Self-assessment and goal-setting exercises.

X Networking and Industry Exposure:

- Opportunities to attend industry conferences, webinars, or networking events.
- Encouragement to connect with professionals in the field.

NOTE

As per AICTE guidelines, in Summer Internship-I, students are required to be involved in Inter/ Intra Institutional Activities viz;

- Training with higher Institutions;
- Soft skill training organized by Training and Placement Cell of the respective institutions;
- contribution at incubation/ innovation /entrepreneurship cell of the institute;
- participation in conferences/ workshops/ competitions etc.;
- Learning at Departmental Lab/ Tinkering Lab/ Institutional workshop;
- Working for consultancy/ research project within the institutes and
- Participation in all the activities of Institute's Innovation Council for eg: IPR workshop/Leadership Talks/ Idea/ Design/ Innovation/ Business Completion/ Technical Expos etc.
